* If shares are distributed in connection with a capital increase out of earnings or capital reserve, further disclose information on market prices and cash dividends retroactively adjusted based on the number of shares after distribution.
Note 1: List the highest and lowest market price of common shares in each fiscal year and calculate the average market price by weighing transacted prices against transacted volumes in each respective fiscal year.
Note 2: Calculate the net worth per share based on the number of outstanding shares at yearend. Calculate the amount of distribution based on the amount resolved by the board of directors or resolved in the next year's shareholders meeting.
Note 3: If retrospective adjustments are required because of issuance of stock dividends, the earnings per share should be disclosed in the amounts before and after the retrospective adjustments.
Note 4: If equity securities are issued with terms that allow undistributed dividends to be accrued and accumulated until the year the Company makes profit, the amount of cumulative undistributed dividends up until the current year should be disclosed separately.
Note 5: Price/earnings ratio = average closing price per share for the year / earnings per share.
Note 6: Price / dividend ratio = average closing price per share for the year / cash dividends per share.
Note 7: Cash dividend yield = cash dividend per share / average closing price per share for the year.
Note 8: Net worth per share and earnings per share are based on audited (auditor-reviewed) data as at the latest quarter before the publication date of the annual report. For all other
fields, calculations are based on the data for the current year as of the date of publication of the annual report.
